

Feedback for RRMP Literature Review [Formative]

Tutor completing formative feedback: Karen Outram	Student number: Nomusa Majola
Details of any extensions etc:	Submission Attempt: Formative

Thank you for submitting your formative.

Good to see you have chosen a topic from the Unit 1 list as required.

From your sub headers: 3-5, you are covering too many subjects for analysis. You only have 2,000 words to examine this topic that you are proposing and so you need to find a very linear and focused discussion point to ensure deep research can take place on a focused topic. Without deep research on a focused topic you will not be able to engage in deep critical discussion looking at the 'pros' and 'cons' of focused research. You need to plan carefully what you are going to do from this perspective. You need varied research resources but these need to be around a very focused aspect of the topic related to your Literature Review main title.

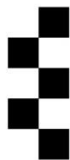

Its fine to have an overview regarding discrepancies in literature, but it is very important to understand that there needs to be a consistent and flowing 'pros' and 'cons' discussion all the way through your content, [the whole assignment] given that this is necessary for any academic assignment but also given that you only have 2,000 words. You are not writing a dissertation at this stage and so the Literature Review does need to focus wholly on a 'pros' and 'cons' discussion on a focused topic connected to your Literature Review title.

***The below general information is circulated to all students from formative, looking forward to summative:**

For the actual summative, ensure that citation is occurring all the way through your content. In-text citation then needs to be reflected in a list of references at the end of the assignment. That list of references needs to be in alphabetical order at the end of the assignment.

For summative ensure that your writing style is wholly formal and academic. Also remember to apply page numbers to your summative document. Ensure that your summative has a critical 'pros and cons' view of discussion, looking at both the positives and negatives of the research that you choose to engage with. It is really important not to just look at one side of research. The content of summative needs to examine different publications and look at different perspectives.

As discussed in live seminars and in student support on the online hub, research for this module is just from secondary research, [and so research that is already in the public domain]. No primary research, [interaction with actual people] is to take place in this module.

Wishing you the best of luck now for your actual summative,

With best wishes

Karen
